### **Save the Whales**

This article is dedicated to the great ones of the ocean who have done so much for humanity and to help in our evolution. The Whales, together with the dolphins, existed long before human existed. These massive beings had been playing a very important role in the eco system and in the earth's system. These beings though look big, however they are gentle and wise beings of love. Like the dolphins, they have a specific duty to do and this is something that scientist are trying to find out more about.

The Whales are beings that work very closely with the magnetic energy of the earth. Like the dolphins, they also travel in various magnetic routes and they play a role similar yet different from the dolphins. The dolphins, esoterically speaking, travel around the earth's electromagnetic grid to spread love around the earth. However, for the whales, they also spread something but it's not love. It is light that the whales spread. The whales with their massive bodies carry the light.

Whenever people around the world or in the etheric realm sends energy down into the earth, this energy cannot be pump into earth instantly. This is because the earth like us is a living being. Like any living being, anyone who receives too much of something especially energy would cause a great disturbance. This would make earth undergo a clearing process in a very imbalance way, resulting in problems like natural disasters and abnormal weather patterns. Thus something must be in the middle to act as a filter that helps to restore a balance integration to the earth. The medium is Whales.

Whales have a special chemical construct within them that help them to take in light energy and they contain the higher vibrations. These vibrations are stored like the hump in a camel's back. These vibrations are resulted in their size. That is also why Whales are so big. They were meant to be mobile store houses for earth. So when earth needs the empowerment or ready for the energy to be released, they will go to the area that requires more energy so as to inject the life force.

The whales also act as an anchor for the energy to come in. So they help the spiritual energy to remain in earth's vibration and not dissipate into the atmosphere. Thus, these loving beings of light are very important for the earth's anchoring and evolution. Having said that, the reason why I am writing this is to raise the awareness and importance to save these beings.

Whales act as the anchor. So the number of whales require to perform this task must be enough in order to do so. Out of the entire world's whale population, there are only 50% which are able to perform the task as light anchor. To be an anchor, whales have to reach

their full maturity. Therefore, if the number of poaching increases, this will lead to a fall in the whales which eventually lead to fewer anchors. The consequences of course would be undesirable.

The lack of anchor would bring more natural disaster because the earth cannot balance itself. Following that is that the earth would also evolve slower because the energy that is being kept for earth is too little. It is just like a man who lost his kidney. So he will become unhealthy and again it leads to illness. So the whales are the kidneys of earth. Love the whale like how you love yourself. Try not to buy whales' related product. We have more than enough food to eat. So whale can be left out of the menu. This would bring the earth more light and balance.

May all hear the cries of the whale and understand their needs.

Namaste
